SketchUp Autodesk SketchUp, which was a year behind AutoCAD in 2006, has a variety of drawing tools and other features. For example, support for dynamic modeling was added in 2009, enabling the modeling of real-time changes without needing to reload the file. SketchUp was one of the first applications to support 3D printing and is used by the people who develop 3D printers and 3D scanners. 3D graphics and rendering For over a decade AutoCAD has been the standard software used to create 3D graphics for use in animation, illustration and product design. AutoCAD Revit was released in 2006 and provided tools for creating 3D computer models of buildings, including 3D visualization and non-destructive editing. AutoCAD Architecture was released in 2013, providing a set of applications for architecture and interior design professionals including 3D visualization of building geometry and parts, 3D models of building geometry, BIM-to-AutoCAD, digital storage, architectural drawings, and architectural visualization. Data management In the early 2000s, Autodesk recognized the need for an Autodesk data management solution. In 2001, they released Design Review, which allows users to "get a bird's-eye view of your entire design process", in the words of Autodesk's CTO, Steve Shepherd. Design Review allows users to monitor their design process and track all the changes in their files, giving them the capability of re-using parts of the designs and avoid being re-entered again. It also provides control over file versioning, asset linking, metadata and revision-tracking. The release of Design Review in 2001 marked the beginning of Autodesk's major push into product design management. According to Autodesk, Design Review offers a "one-stop shop" for the design process, bringing design information from the drawing to the BIM model. It also offers a platform to build 3D visualizations of construction and its progress. In 2003, Autodesk released Design Review 2.0, which included the Design Review Application Programming Interface (API). This release brought to the Autodesk data management platform the capability of viewing design information, which until then was limited to designing. In 2005, Autodesk released an online version of Design Review, Autodesk Navisworks, which brought design information to the Web. Autodesk's Navisworks is a portal that combines web a1d647c40b
