**System Requirements:**

GTA V is a massive undertaking. If you run at least a mid-range PC on a console, you'll have no problems playing. If you're a PC gamer, though, then you'll want something between a Quad Core i5 and an i7. Both are fine, but i7s tend to be a bit faster. If you have a modern GPU, you'll be able to play in 1080p. If you have a lower-end GPU, then you'll want to crank the resolution up to at least 1920x
