This article is meant to provide a basic overview of the Photoshop editing program and its features. Use this as a starting point for continuing your Photoshop learning. What is Photoshop? The name Photoshop is a shortened version of Photoshop® Electronic Imaging System, which describes the original program when it was first released in 1987. Photoshop is a digital image editing application. Adobe has

released several versions of the software. In short, Photoshop is an image editor: You can use it to change images to look better or to manipulate them in many other ways. Photoshop offers a wide range of features that include: Editing photos (that is, cropping, sizing, rotating, color correction, contrast adjustment, enhancement, and sharpening and using brush tools). Adjusting the tonal range of an image using tools such as curves or levels. Creating, modifying, saving, and printing graphics, such as logos. Adjusting and correcting photos taken with a digital camera. Repairing photos damaged by poor quality equipment or by computer problems. Burning images

into wood and other materials. Altering text styles, such as adding drop shadows or changing the color of an element. Creating art images, such as paintings, drawings, and cartoons. Creating web pages and animation for the web. What is Photoshop CS 6? If you are new to Photoshop, then you will be happy to know that Adobe has released Photoshop CS 6, which means "Creative Suite 6" and is an upgraded version of Photoshop CS 5. The new version includes: Additional features, such as an updated workspace and a new tool, like the Enhance Details tool. New features, such as the Paintbrush tool. Easier to use, with an improved user interface and

more tutorials. Improved overall performance. What is a Crop tool? In Photoshop there are a number of tools that allow you to edit an image. One of these is the Crop tool. With the Crop tool, you can crop (cut) out a part of an image to leave just the image area you want to use. This is done by dragging your cursor over the image area you want to use and then clicking and dragging inside the image until the area is cropped. You can make the cropped area rectangular, square, or circular, and the tool enables you to select

This article will focus on the 10 steps to create a customized graphic designs for your children or pets with the help of Photoshop Elements, which is mainly used to edit photos, graphics, and other digital images. Adobe Photoshop Elements has many more features, so it includes many different features to help

you create a high-quality and unique design for your business or website. Here we will share some of the best features to help you create a design for your kids or pets. Step 1: Open Photoshop Elements, and Add Your Photos Open the file of your favorite photo in the digital photography software Adobe Photoshop Elements. You can be sure that it has enough space on the hard disk so that you can edit the image. 2: Create Outline To give your artwork a colorful outline, you will need to create a new layer. Open the Edit menu and select Create a new layer. Then name the layer "Outline". 3: Choose Gradient for Base Color You

will need to choose a custom color for the base color of the artwork. If you want to paint a design for your kids or pets, the color should be pink. To do this, click on the dropdown menu of the color bar at the top of the screen and choose "R" Then click anywhere on the screen to select that color. Then enter the color code which is #f06a00 Now, choose gradient stroke from the different color options to outline the design. 4: Create Background Image Click on the Layer menu at the top of the screen and select Create a new fill or adjustment. Enter a name for the fill layer, then pick a background color as your base color and click OK. 5: Choose

Gradient for Foreground Color Repeat the same process for the foreground color by choosing a new color from the drop-down menu. If you want your design to be pink, choose any pink color. Click on the drop-down menu of 05a79cecff

Effects of pretreatment of rat adipocytes with interferon-gamma on interleukin-1beta-induced adipocyte conversion. The effects of interferon-gamma (IFN-gamma) treatment of adipocyte-derived fibroblasts (ABS)

isolated from rat epididymal white adipose tissue on their subsequent conversion to adipocytes, were investigated. The differentiative effects of IFN-gamma were studied by applying staining procedures to cells cultured on plastic dishes as well as on substrates including rat tail collagen IV (RT-collagen) and silicone rubber membrane. Cells cultured on RT-collagen were further treated with agents including lipoprotein lipase (LPL), prostaglandin E2 (PGE2), and thrombin. Cells cultured on silicone rubber membrane were further treated with the aforementioned agents and/or with IFN-gamma. The resultant effects on cellular morphology

were determined by scanning and transmission electron microscopy. Cell responses were examined by expressing cell-associated enzymes and a reporter gene, a fusion of the lacZ sequence with a fragment of the human glucocerebrosidase gene. Fibroblastic cells on RT-collagen were readily converted to adipocytes when treated with 10 ng/mL (108 U/mL) of IFN-gamma. In contrast, cells cultured on plastic dishes were converted to adipocytes only after treatment with 40 ng/mL (425 U/mL) of IFN-gamma. The numbers of cells converted to adipocytes in response to 10 ng/mL (108 U/mL) and 40 ng/mL (425 U/mL) of IFN-

gamma were approximately equal. A treatment of IFN-gamma to ABS cells before or after plating onto silicone rubber membrane did not result in the rapid conversion of cells to adipocytes; rather, it resulted in a suppression of adipocyte conversion of ABS cells. However, the treatment of ABS cells cultured on silicone rubber membrane with IFN-gamma in combination with the agents LPL, PGE2 and thrombin significantly enhanced adipocyte conversion. Our results indicate that IFN-gamma treatment of ABS cells before plating onto silicone rubber membrane resulted in an enhanced conversion of cells to adipocytes. Conversely, IFN-

gamma treatment of ABS cells after plating onto silicone rubber membrane suppressed adipocyte conversion. The IFN-gamma-mediated effect of stromal cells (
